TdB Labs signs distribution agreement with specialty company in the US

Uppsala, June 2, 2021. TdB Labs today announced the signing of a distribution agreement with US company Chondrex, Inc. Woodinville, Washington. Chondrex is a specialty company developing and distributing reagents for inflammatory disease research. The company will sell TdB Labs premium quality dextran products, with special focus on dextran sulfate and fluorescent dextran derivatives. Dextran sulfate 40kDa more known as DSS is the gold standard for colitis studies and our fluorescent labeled dextran derivatives are mainly used in permeability studies in cells and tissues. Polysaccharide derivatives have a high biocompatibility and have been widely employed within life science.

'The dextran sulphate products from TdB Labs are today considered the Golden Standard. These well reputed and documented products will strengthen our offering of tools to researchers looking to find causes and better understand ways to treat colitis and inflammatory bowel disease, IBS,' says Takaki Waritani, CEO, Chondrex, Inc.

'Chondrex is the perfect fit for us to better reach the US market and increase the service to existing and new customers. We are happy to start this relationship and to get an opportunity to evaluate synergies in the market going forward,' says Charlotte de Belder Tesséus, CEO, TdB Labs AB.

TdB Labs was founded by the dextran pioneer Tony de Belder in 1991. We are specialised in the development and manufacturing of dextran derivatives and other polysaccharides. The company offers fluorescent and non-fluorescent derivatives, including dextran sulfate sodium (DSS) for colitis. We also offer analytical services specific to dextran and polysaccharide derivatives. An important part of our company comprises the development and production of customised products.
